Vanessa Mae - A0258092Y - Accomplishment

I feel accomplished that I have managed to make a CRUD website using a new programming language that I have not delved into before like the Golang programming language. Although I have dabbled with React before, this assignment is a good refresher of what I have learned about React and React Native before when I made a mobile application. I also get to learn new things about React that I have not really known before and it was pretty enriching of an experience.

Well although the process is not always smooth sailing, I have learned and gleaned a lot of things. I encountered challenges along the way especially because I have not touched Golang before. Using online lectures in Udemy and other learning resources, I learned a lot of things about Golang and other things like GORM and Go Fiber which helped a lot in the process. Besides that, I also tried to deploy the website using Docker, something that I have not done before. Despite facing some hiccups and bugs, I am grateful to find useful resources like the StackOverflow community to figure out the solutions. I also get to learn deeper and apply some of my basic knowledge on SQL to build a real project since I believe it is also a frequently used thing as a database back-end.

Accomplishments aside, I feel that there are a lot of things to be improved and code design that I can make improvements on. The UI/UX design can also be made more user-friendly and more aesthetic to attract users to use the web forum. The web forum could also have been made accessible and read by users who do not have an account like how Reddit forums work.

Overall, I am really satisfied with the progress and things I learnt throughout the learning journey of this CVWO assignment,

User Manual - https://frontend-5eeiwxtbdq-as.a.run.app/

1. User to register if they do not have an account

2. Sign in Page if they already have account they can just input their credentials

3. Home page where users can navigate to create or go to the general forums

4. Users can create forum and input the title, content and category of the forum they are creating

5. Users can filter the forums according to the categories they want to filter it based on

6. Users can make a comment on other users' forum

7. Users can choose to edit the content of their forum or delete their forum
